

Business Insights Summary – Olist Sales Dashboard

1. Business Overview

The dashboard was developed to analyze Olist sales performance using business intelligence techniques. The objective is to understand revenue performance, customer behavior, product success, regional sales distribution, and delivery efficiency.

Key KPIs analyzed:

- Total Revenue
 - Number of Orders
 - Average Order Value (AOV)
 - Delivery Success Rate
 - Product Category Performance
 - Regional Revenue Performance
 - Monthly Revenue Trend
-

2. Key Trends

Revenue Performance

The company generated a **total revenue of 243.65M** from approximately **99K orders**.

The monthly revenue trend shows periods of strong growth during the middle months of the year, reaching peak performance around **Month 5**, followed by a noticeable decline toward the end of the period.

Observation

This suggests possible **seasonality in customer demand**, where sales increase during specific months and weaken later.

Recommendation

The business should investigate factors behind peak months and apply similar strategies during weaker periods through promotions and targeted campaigns.

3. Product Performance Insights

The highest-performing product categories are:

1. **Cama Mesa Banho**
2. **Beleza Saúde**
3. **Informática Acessórios**

These categories consistently generated the highest revenue.

Observation

These products likely represent strong customer demand and high purchasing frequency.

Recommendation

The company should:

- Increase inventory for high-performing categories
- Invest more marketing budget in these segments
- Create bundled promotions around best-selling products

Meanwhile, lower-performing categories such as **Bebês** and **Brinquedos** may require promotional improvements or pricing review.

4. Regional Performance

Revenue distribution by state indicates that:

- **SP (São Paulo)** generated the highest revenue by a large margin.

- **RJ** and **MG** also showed strong performance.
- States such as **ES** and **DF** generated relatively low revenue.

Observation

Revenue concentration in a few regions indicates an opportunity for expansion in underperforming states.

Recommendation

The company should:

- Launch regional marketing campaigns in weaker states
 - Improve regional product targeting
 - Analyze customer preferences by region
-

5. Delivery Performance

The delivery success rate is **97.82%**, which indicates excellent operational performance.

Observation

The company maintains a very high delivery completion rate, suggesting strong logistics and customer fulfillment systems.

Recommendation

The organization should maintain current delivery standards while monitoring delayed or canceled orders to improve customer satisfaction further.

6. Average Order Value (AOV)

The Average Order Value (AOV) is **2.47K**, meaning customers spend a considerable amount per purchase.

Recommendation

To increase AOV further, the company can:

- Introduce product bundles
- Offer cross-selling recommendations
- Provide discounts for higher cart values

7. Strategic Recommendations

Based on the dashboard findings, the following actions are recommended:

1. Focus investments on top-performing product categories.
2. Improve sales in underperforming regions through regional campaigns.
3. Maintain high delivery performance standards.
4. Use seasonal sales patterns for planning promotions.
5. Increase Average Order Value through bundled offers and upselling.
